

Energy Savings Calculations or Energy Model

Acceptable analysis tools for electric energy savings calculations will include the following standard energy modeling software:

- EnergyPro
- eQuest
- EnergyPlus
- Trace

Industrial/Process Assessments shall include calculation tools/spreadsheets utilizing trend log data organized in a transparent fashion, allowing for easy review of engineering calculations and use of parameters.

A standard Excel spreadsheet and/or other energy models will be accepted on a case-by-case basis for industrial processes, efficiency measures, controls, or systems that cannot be modeled using existing modeling software.
