Installation of Groundwater Production Wells

LADWP Mission Wells Facility in Sylmar

LADWP will be installing three new groundwater production wells within LADWP Mission Wells facility, located at the corner of Bleeker Street and Havana Avenue in the Sylmar community of Los Angeles. The new wells will be installed in the area of the facility north of Genoa Street.

Groundwater is a key local water resource that the City of Los Angeles relies upon in serving its customers, comprising 11% of the total water supply for the City on average each year. New modern design production wells will improve the reliability and quantity of groundwater pumped out of the Sylmar Basin.

- **Estimated Construction Schedule: January - April 2015**
- **Construction Hours**
24 hours a day, 7 days a week
- **Three new production wells will be constructed at this site**
- **Each well construction will last approximately 4 to 5 weeks.**
- **One well will be under construction at a time.**

This project requires continuous construction, including night work, to ensure the stability of the boreholes for the groundwater production wells.

Construction will not affect your water or power service unless unforeseen circumstances require a service interruption.

For questions or concerns regarding construction during regular and overnight work hours, please contact: Richard Carbajal at (213) 367-0822
