

## **Technical Group June 11, 2009 Recommendation for Permanent Monitoring Stations for the Lower Owens River Project**

As required by the Superior Court of California Stipulation & Order for Case No. S1CVCV01-29768, the Los Angeles Department of Water & Power is posting its understanding of a June 11, 2009 Inyo County/Los Angeles Department of Water & Power Technical Group final action pertaining to the Lower Owen River Project (LORP). The Technical Group agreed to make the following recommendation to the Inyo County/Los Angeles Standing Committee:

### **Recommendations for LORP permanent flow measuring stations**

Having reviewed the MOU consultant's recommendations and analysis by staff, the Technical Group recommends that the following stations be maintained as permanent flow measurement stations:

- Intake Control Structure
- Mazourka Canyon Road
- Reinhackle
- Pumpback Station outlet pipe
- Langemann Gate at the Pumpback Station
- Spillway Weir at the Pumpback Station

Existing measuring stations that are not designated as permanent stations will be discontinued except for the existing staff gages which will remain in place.
